

■ SHIN-EI Group on the global market

At SHIN-EI Group, we provide solutions to a wide range of needs through our advanced technology and international network (six subsidiaries in four countries).

Regarding the decorative aluminum business, automatic and manual silkscreen printing is performed in Japan while other operations from metal processing to surface treatment are carried out by Shinei Corona Vietnam.

Almillion decorative products created by world-class aluminum finish technology

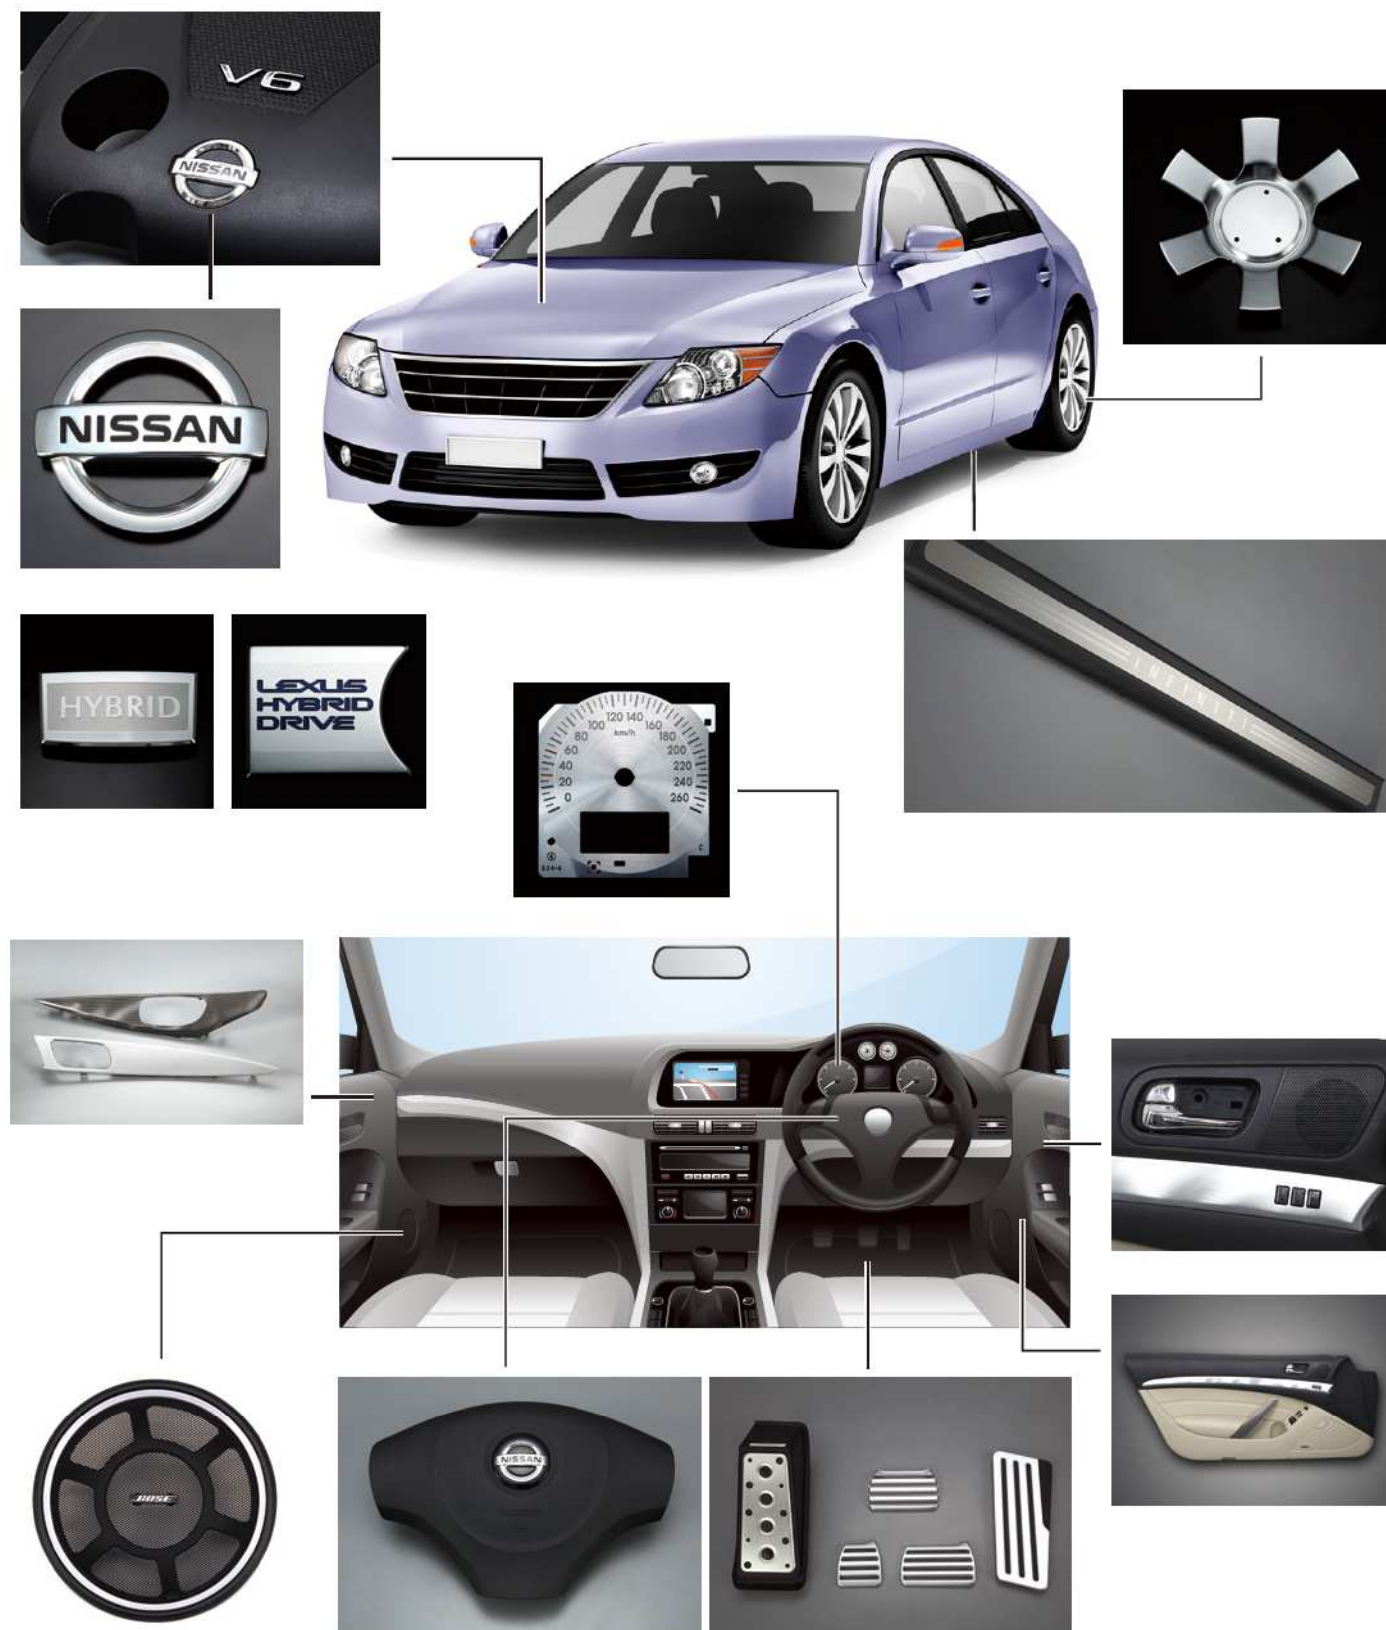

Our company manufactures aluminum products such as emblems, decorative panels and frames for automotive, home electronics and house furniture products.

We use machining processes (engraving, stamping, hairline finishing, sandblasting) and surface treatment processes (anodizing, printing, etching) to transform aluminum panels to any form required by our customers from a wide variety of designs.

Almillion

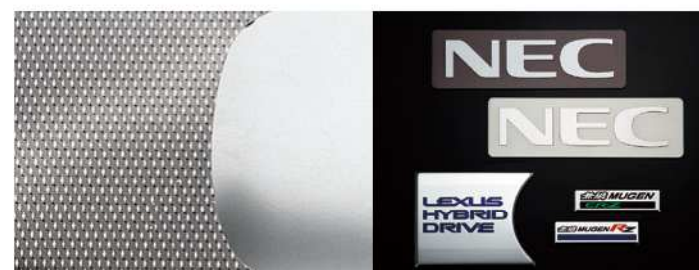

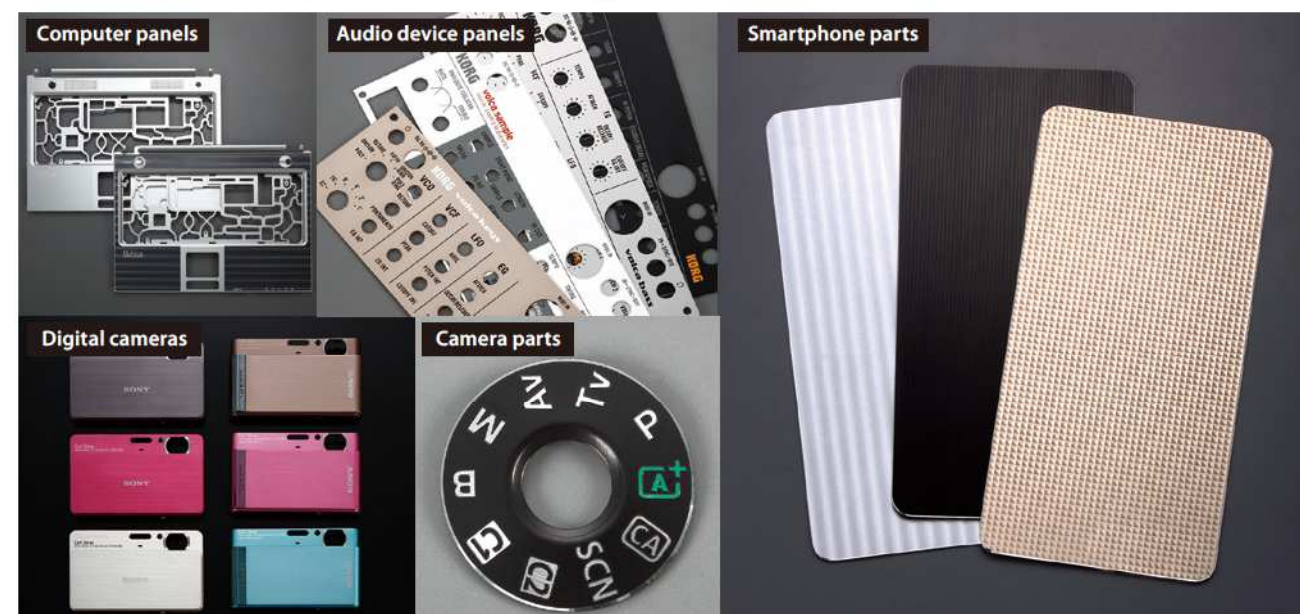

■ Hairline finishing

The surface of aluminum sheets are processes to obtain a deluxe aspect and depth.

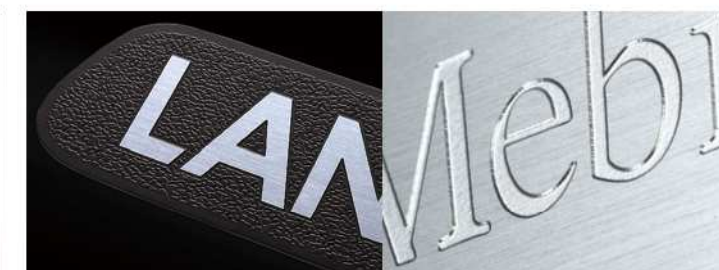

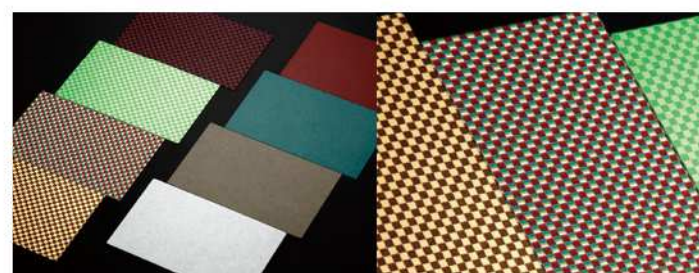

■ Color anodizing

Provides a wide range of dark to vivid colors while increasing weather and corrosion (ultraviolet, acid rain, salt) resistance.

■ Highly detailed silkscreen

Produces detailed and colorful patterns using multi-layer printing.

■ Super etching

Produces sharp relief via double etching process and with protrusion depth of 0.2 (deepest in the market).
